BUREAU OF THE CENSUS

**Abstract** The purpose of this study was to determine the effect of a 10-week, 100-hr, 100-mile, 100-lb. weight loss program on the body composition of 100 obese women. The program was designed to be a total lifestyle change, including diet, exercise, and behavior modification. The program was evaluated using a pretest-posttest design. The results of the study showed that the program was effective in reducing body weight, body fat, and body mass index (BMI). The program was also effective in increasing lean body mass (LBM) and bone mineral density (BMD). The program was well tolerated and had no adverse effects on health. The results of this study suggest that a 10-week, 100-hr, 100-mile, 100-lb. weight loss program is an effective and safe method for weight loss and body composition improvement in obese women.
